

FACT SHEET: Family Income

MISSING VOTERS PROJECT: Young Adults 2016

Young Adult Voting by Family Income

Citizens 18 to 24 years old residing in families in 2016

Total = 16.1 million (see text)

Who is Included in the Voting by Family Income Chart?

Family income is the total annual dollar income for all members of a family combined. Family members were defined as people with the following relationship to the householder: spouse, child, grandchild, parent, sibling, or other relative. The data presented here are limited to persons 18 to 24 years old who resided in a family and reported income. The Bureau of the Census excluded foster children, unmarried partners, non-relatives, and roommates from family income tabulations. Voting data for respondents who refused to state their family income or reported not knowing their family income are not shown.

Voting by Family Income

Only about one-third (or fewer) of young low-income citizens voted in 2016: 26.7% of those with family incomes less than \$10,000 per year, 34.8% of those with family incomes \$10,000 to \$14,999 per year, and 32.6% of those with family incomes \$15,000 to \$19,999 per year.

In contrast, more than half of young adult citizens with the highest family incomes voted in 2016: 52.8% of those with family incomes \$100,000 to \$149,999 per year and 59.0% of those with family incomes \$150,000 per year and higher.

Missing Voters by Family Income

We did not calculate counts of missing voters by family income for young adults because of the substantial number of citizens who were missing family income data (10.8 million out of 26.9 million) in the Bureau of the Census datasets.

Notes

Please note that some numbers may appear not to add up correctly due to rounding. Voting data are from the Current Population Survey (November 2016). Population counts and percentages in this report are statistically-weighted estimates derived by the Bureau of the Census from a national sample of over 90,000 respondents in 54,000 households.
